

AI/AT Innovators in Education

Services to primary secondary
and 16+ schools and academies

Services to primary secondary and 16+ schools and academies

For more than three decades, Microlink has dedicated itself to empowering businesses, corporates and Higher Education Institutions to attain remarkable outcomes for young people and adults with disabilities or long-term illnesses, through making workplace adjustments and supplying cutting edge technological solutions that remove barriers to working and learning.

Microlink's unwavering commitment to technological innovation continues to drive transformation in the workplace and pave the way for a brighter, more inclusive future.

Since 2021, Microlink has directed this energy and commitment towards transforming outcomes in schools and colleges:

Nearly 600 primary and secondary schools have engaged in programmes to introduce Assistive Technologies into mainstream classrooms, paving the way for further AI-driven developments

Over 400 school communities have accessed Raising Attainment with Wellbeing, impacting positively on inclusive culture and climate as well as approaches and practice.

We understand the financial pressures that schools are under.

We have therefore created a number of low-cost, affordable pathways to join our wonderful community of practice, as outlined in this document.

Maybe we can help in other ways too?

Maybe you have Edtech that is languishing in cupboards because you lack the expertise to put it to good use? We can help with training and support.

Maybe we can help you reduce the cost of inclusion through using our buying power and sharing our knowledge of new and emerging technologies?

Maybe we can help with reducing the institutional costs of software licences and the purchase of inclusive hardware?

Coach-led AI/AT Audit based on the Be ThAT Teacher Needs Analysis framework

p.33 “...Some appreciated that it was a succinct resource with just 12 questions that helped map out the wider impact of AT on school policies, budgeting and staff training. Many felt that it was the most useful element:

“I find that the [self-audit tool was] most useful and that was probably the most poignant thing to show to senior leaders to say we're working here and ideally I think we should be here and actually for the leaders to recognize in a very succinct way–“

Training participant, special school, East Midlands”

Raising Attainment with Wellbeing

The results have been extremely positive
(DOWNLOAD ANNUAL REPORT)

Already, over 400 schools have joined the programme. The Isle of Man and two MATs (Multi-Academy Trusts) are using RAW extensively across their communities of schools.

The resources are made available through an interactive learning platform, equivalent to nearly 800 hours of professional development activity.

A Needs Analysis framework helps schools to identify strengths and needs, and helps to prioritise development activity for different groups of staff. The programme is available with coaching (see below)
